

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

June 3, 2003

Re: IRO Case # M2-03-0974

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the ___ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 31-year-old male who on ___ grabbed a falling transmission and developed back and neck pain. The neck pain has subsided, but the back pain has persisted. An MRI on 12/11/02 suggested some question of disk change at the L5-S1 level, but without anything distinctly surgical present. The patient's pain has persisted, but he has been able to work in a limited capacity.

Requested Service(s)

Lumbar myelogram with CT scan

Decision

I disagree with the carrier's decision to deny the requested procedure.

Rationale

The requested procedure frequently shows changes not appreciated on MRI, which can explain the patient's symptoms. When flexion and extension views are included in the study, it is sometimes very beneficial determining if there is a problem with instability. In this patient's circumstance, instability creating "mechanical" back pain is a possible diagnosis.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
